

Guidelines to prevent the transmission of coronavirus (COVID-19)

WHAT IS COVID-19?

COVID-19 is a new illness that affects the lungs and airways. It is caused by the SARS-CoV-2 coronavirus, which is transmitted person to person.

COVID-19 spreads easily and quickly in humans. We are all susceptible to catching it as we have no natural immunity.

WHAT IS THE RISK OF CATCHING COVID-19?

Since there is currently no vaccine for COVID-19, the only way to stop transmission is by people changing their behaviour. This means improved personal hygiene, avoiding crowds and adopting social (physical) distancing.

HOW DO I KNOW IF I HAVE COVID-19?

People with COVID-19 experience mild to severe respiratory illness that can last for several weeks.

Signs and symptoms can include:

These symptoms are common to MANY other infections and diseases.

The only way you know for sure that you have coronavirus is by receiving a positive test result.

Even if you have had the virus and have fully recovered, you **MUST** continue to follow social distancing guidelines.

WHAT SHOULD I DO IF I HAVE ANY SYMPTOMS?

Anyone showing symptoms of COVID-19 must:

Stay at home

Isolate for at least 14 days

Wash your hands regularly with soap and water

Clean and disinfect the objects and surfaces you touch

Be careful to limit contact with household members

If symptoms persist or you are feeling worse, please call your local health service for more advice.

HOW CAN I CATCH THE VIRUS?

You can catch the virus by:

Inhaling droplets released when an infected person sneezes or coughs

Touching contaminated surfaces and then touching your face

Close contact with infected people

HOW SERIOUS IS COVID-19?

Around 75–80% of people with the disease only have mild symptoms, and 95% of people who have been sick with the disease recover.

However, a small proportion of patients have to be hospitalised and some, tragically, may die.

WHO IS MOST AT RISK?

People over 70

People with existing lung or heart problems

People with any underlying immune system problems

People who are overweight

People with diabetes

HOW CAN I REDUCE THE RISK OF COVID-19 AND PROTECT OTHERS?

Wash your
hands regularly
with soap
and water

Avoid
touching your
eyes, nose
and mouth

Cough or sneeze
into your elbow,
or into a tissue
which should
then be safely
discarded

Wear a face
mask or covering
at all times when
stepping outside

Regularly clean
and disinfect the
objects and
surfaces you
touch

1m

Maintain social
distancing –
keep at least 1 m
distance between
yourself and
other people

WHAT SPECIAL PRECAUTIONS MUST I TAKE WHEN TRAVELLING AND VISITING FARMING COMMUNITIES?

Wash your hands regularly with soap and water; if you have hand sanitizer use it between each visit

Wear a face mask or covering at all times when stepping outside

Use disposable gloves when handling products

Regularly disinfect working tools (workstations, computers, tablets, etc.)

Communicate remotely and work from home wherever possible

Comply with social distancing recommendations and avoid personal contact

Stay in touch with your local health authorities and district extension officers to help identify where there are known incidents of COVID-19 – and avoid these areas

If you are feeling unwell, please stay at home

REMEMBER

Stay home if you are sick

Avoid crowds

Cover coughs and sneezes

Wash your hands often

Clean used surfaces frequently

Stay safe and keep healthy
